0000

SR3AD is a safety switching device specially designed for sensors with antivalent logic (normally open / normally closed combination). In case of danger, the moving parts of a machine or system can be quickly and safely shut down via three safe relay contacts. The SR3AD is used to monitor safety gates and safety guards on machines and systems. The SR3AD can be used to monitor safety gates on machines and plants in accordance with EN ISO 13849-1, EN IEC 62061 and in systems in accordance with IEC 61508 and IEC 61511. In addition, it has been tested and approved by TÜV-Rheinland for use in burner applications in continuous operrtion in accordance with EN 50156 1 and EN 762 up to EN 2

EN IEC 62061 IEC 61508 EN 746 - 2 EN 50156 - 1	 TÜV-Rheinland for use in burner applications in continuous operation in accordance with EN 50156-1 and EN 746-2 up to SIL 3. 3 redundant safety contacts auxiliary contact Connection of: Reed contact sensors Safety door switches Safety position switches Safety position switches Dual channel control Feedback loop for external contactors or extension modules Cyclical monitoring of the output contacts 	 LED indicators for power and status Automatic or manual start Short-circuit monitoring and ground fault monitoring Up to PL e, category 4, SIL 3
Function	The safety relay SR3AD is designed for isolation of safety circuits according to EN 60204-1, stop-category 0 and can be used in safety-related applications up to safety cat. 4, PL e / SIL 3 according to EN ISO 13849-1 / IEC 61508. The safe inputs are activated by closing the contact between S11 and S12 and opening the contact between S13 and S14. When the start button is pressed, the safety contacts are closed by the internal logic. By deactivating the safe inputs, the positively driven safety contacts are opened and switch off the machine safely. It is ensured that a single fault does not lead to the loss of the safety function and that each fault is detected by cyclical self-monitoring no later than when the machine is next	switched off and switched on again. Safety-Out AUX A1 A2 S11 S12 S21 13 23 33 41 rowien room room room room room room room roo
Installation	 As per EN 60204-1, the device is intended for installation in control cabinets with a minimum degree of protection of IP54. The following should be noted: Mounting on 35 mm rail according to EN 60715 TH35 Ensure sufficient heat dissipation in the control cabinet With the AC 115 V / 230 V version, a minimum distance of 10 mm to adjacent devices must be maintained Note: Spacer from ZANDER AACHEN (Art. No. 472596) for defined distances - See section Accessories. 	Fig. 2 Mounting / Demounting
Safety Precautions	 Installation and commissioning of the device must be performed only by authorized personnel and who has read and understood this operating instructions. Observe the country-specific regulations when installing the device. The electrical connection of the device is only allowed to be made with the device isolated. The wiring of the device must comply with the instructions in this operating instructions, otherwise there is a risk that the safety function will be lost. It is not allowed to open the devices. The contact protection and the insulation of the supply cables must be designed for the highest voltage to the device. It is not allowed to open the device, tamper with the 	 device or bypass the safety devices. All relevant safety regulations and standards are to be observed. The overall concept of the control system in which the device is incorporated must be validated by the user. Failure to observe the safety regulations can result in death, serious injury and serious damage. Note down the version of the product (see label "Ver.") and check it prior to every commissioning of a new device. If the version has changed, the overall concept of the control system in which the device is incorporated must be validated again by the user. The year of manufacture can be found on the type label on the device. It is located at the end of the line of the voltage specification, below the ID number.
Electrical Connection	 When using the 24V version, a safety transformer according to EN 61558-2-6 or a power supply unit with electrical isolation from the mains must be connected Observe the instructions in the section "Tech. Data" A suitable protective circuit for inductive loads (e.g. freewheeling diode) must be provided If the device does not function after commissioning, it must be returned to the manufacturer unopened. Opening the device will void the warranty The auxiliary contact 41-42 may not be used as a safety contact 	$ \begin{array}{c c c c c c c c c c c c c c c c c c c $

Operating Instructions

Applications

Depending on the application the device must be wired as shown in Fig. 4 to Fig. 11.

Safety Circuit

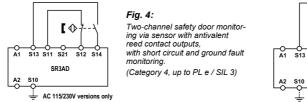

Fig. 5:

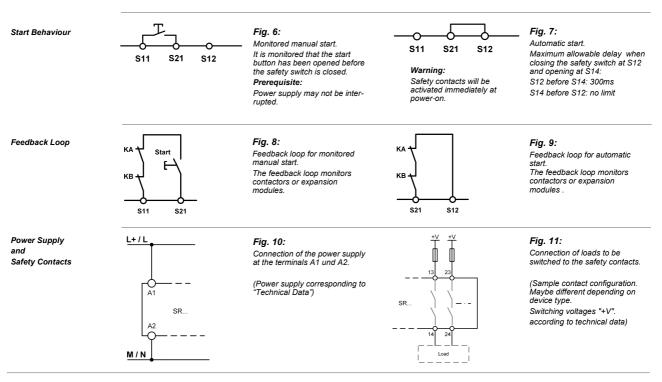

Dual channel safety guard monitoring with short circuit and ground fault monitoring. (Category 4, up to PL e / SIL 3)

Notice:

• In order to activate earth fault monitoring, S10 must be connected to PE (protective earth) on the AC 115/230 V devices

· For AC/DC 24 V devices, the earth connection of the power supply unit must be on the secondary side

• The start circuit must be wired corresponding to the application according to Fig. 3 or Fig. 4.

Commissioning Procedure

Advice: Follow the guidelines in "Electrical Connection" during the start-up.

1. Safety circuit:

Connect the safety inputs according to one of the wiring diagrams in "Applications" (Fig. 4 or Fig. 5).

2. Choose start mode:

Connect the start input according to Fig. 6 or Fig. 7 to set the start behaviour.

Warning:

If "Automatic start" is set, bear in mind that the safety contacts will switch immediately after the power supply is connected. If "Monitored manual start" is set, the start button must be opened after wiring.

3. Feedback loop:

If external contactors or extension modules are used, connect them according to Fig. 8 or Fig. 9.

4. Power supply:

Connect the power supply to A1 and A2 (Fig. 10). *Caution:*

Carry out the wiring only in de-energized state.

5. Starting the device:

Switch on the operating voltage.

Warning:

If the "Automatic start" starting behaviour is set, the safety contacts will close immediately.

If the "Monitored manual start" starting behaviour is set, close the start button to close the safety contacts. LEDs *Pwr*, *K1* and *K2* are lit.

6. Triggering safety function:

Deactivate the safety inputs by actuating the connected safety switch. The safety contacts will open immediately. The LEDs K1 and K2 go out.

7. Reactivation:

Activate the safety inputs. If "Automatic start" is selected, the safety contacts will close immediately.

If the start behaviour "Monitored manual start" is set, close the start button to activate the safety contacts.

Operating Instructions

Check and Maintenance	 The following checks are regularly required to ensure proper and continuous functioning: Check the switching function. Check for signs of manipulation and safety function bypassing. Check if the device is mounted and connected securely. Check for soiling. 	Check if the safety device is working properly, in particular:Every time after initial commissioning.Every time after replacing a component.After every fault in the safety circuit.	
	According to CNB / M / 11.050, a request for the safety functio • Once a month for applications up to PL e with Cat. 3 or Cat. • Once a year for applications up to PL d with Cat. 3 or SIL Cl	4 or SIL CL3, SIL 3 with HFT = 1	
 What to do in Case of a Fault? Device does not switch on: Check the wiring by comparing it to the wiring diagra Check the safety switch for correct function and adjument. Check whether the safety inputs are activated. Check whether the start button (manual start) is close Check the operating voltage at A1 and A2. Is the feedback loop closed? 		 Device cannot be switched on after a safety request: Emergency stop circuit was closed again. Was the start button opened before closing of the emergency stop circuit (manual start)? Is the feedback loop closed? If the fault still exists, perform the steps listed und "Commissioning Procedure". If these steps do not remethe fault either, return the device to the manufacturer. Opening the device is not permitted and will void twarranty.

Failure to comply with the above conditions for proper use, failure to follow the safety instructions or failure to carry out any maintenance work as required will result in a disclaimer of liability and loss of warranty.

ATTENTION

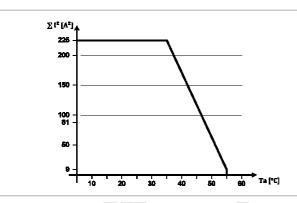

We would like to point out that ensuring the availability of the system is the sole responsibility of the operator. The SR3AD is a safety switchgear according to

- EN ISO 13849-1
- EN IEC 62061
- EN IEC 6200
- IEC 61508
- EN 50156-1

Fixed

Terminals

which branches to the safe state when the safety function is required. This means that the connected load is switched off as soon as a request via connected sensors or diagnostic measures register a dangerous state, e.g. caused by a component fault. Since process applications in particular have high availability requirements, limited availability can also have considerable consequences.

It is therefore recommended to stock a second unit to avoid long downtimes in such a case.

These are recommendations of the manufacturer, the evaluation of the importance of the system availability is solely the responsibility of the operator.

Total current limit curve depending on the ambient temperature for 115 V / 230 V variants with 10 mm gap between the devices.

Total current: $\sum I^2 = (I_1 + I_2 + I_3)^2$

Note: Actual number of front LEDs may differ from the number shown in the drawing, depending on the variant.

Proof-Test

activation of the safety function.

• Close the safety circuit and start the device again. Check that the safety contacts (13-14; 23-24; 33-34) closed again. If the device doesn't switch on again, the proof-test failed.

ATTENTION:

If the proof-test fails, the device must be replaced. Otherwise there is a risk of loss of functional safety.

Die Produkte stimmen mit den Vorschriften folgender Europäischer Richtlinien überein: The products conform with the essential protection requirements of the following European directives: Les produits sont conformes aux dispositions des directives européennes suivantes:

2006/42/EG	: Maschinenrichtlinie	2011/65/EU: RoHS Richtlinie
2006/42/EG	: Machinery directive	2011/65/EU: RoHS directive
2006/42/EG	: Directive Machines	2011/65/EU: Directive RoHS
2014/30/EU 2014/30/EU 2014/30/EU	: EMV Richtlinie : EMC directive : Directive CEM	

Die Übereinstimmung der bezeichneten Produkte mit den Vorschriften der o.a. Richtlinie wird, falls an-

Wendbar, nachgewiesen durch die vollständige Einhaltung folgender Normen: If applicable, the conformity of the designated products is proved by full compliance with the following standards: Le strict respect des norms suivantes confirme, s`il y a lieu, que les produits désignés sont conformes aux dispositions de la directive susmentionnée:
